

UNLOCK THE POWER OF AUTOMATION WITH UIPATH

OCR - API DOCUMENT - SCREEN SCRAPING SOLUTIONS

THE UIPATH BUSINESS AUTOMATION PLATFORM IS THE FOUNDATION OF INNOVATION

API DOCUMENT

The documentation covers various areas of the UiPath Orchestrator API, including managing users, robots, assets, queues, processes, and schedules. Additionally, the UiPath API documentation provides guidance on how to handle common use cases and scenarios, such as deploying robots, managing jobs, and interacting with assets.

OPTICAL CHARACTER RECOGNITION

UiPath OCR activities are designed to perform various OCR-related tasks, such as extracting text from images, converting scanned documents into searchable PDFs, and automating data entry tasks. The OCR activities can be used to automate various business processes that involve processing of paper-based or image-based documents.

SCREEN SCRAPING

The UiPath screen scraping capabilities can be useful for automating various business processes that involve capturing data from different types of applications and websites, such as financial data from banking websites, customer information from CRM systems, or product information from e-commerce websites. The UiPath screen scraping capabilities can help businesses save time and reduce errors associated with manual data entry.
